STRV

# HOW TO MAKE SURE EVERYTHING LOOKS OK?

Maybe take a picture and compare it with some reference?

# MEET SNAPSHOT TESTING

STRV

# SNAPSHOT TESTING

- Visual testing method
- Comparing screenshots
- Record mode - generate snapshots and store them
- Test mode - compare snapshots with reference ones to check for changes

# WHY DO THIS?

- See how your views look like during development
- Test different and hard to reach states
- Easy to write tests
- You know when something breaks

# FBSnapshotTestCase

- Developed and used by Facebook
- Testing multiple devices and screen sizes
- Can show difference in case of failed test
- Customizable to specific workflow
- CI friendly

# FBSnapshotTestCase

- Install via CocoaPods
- Set `FB_REFERENCE_IMAGE_DIR` environment variable
- And start testing!

# FIRST TEST

```
class SnapshotTestingTests: FBSnapshotTestCase {  
    override func setUp() {  
        super.setUp()  
        isDeviceAgnostic = true  
        // recordMode = true  
    }  
  
    func testMemeDetailViewController() {  
        let vc = R.storyboard.main.memeDetail()!  
        vc.meme = Meme.memes.first  
        FBSnapshotVerifyView(vc.view)  
    }  
}
```

# DEMO

STRV

# PREPARING YOUR CODE

- Create view controllers separately
  - Storyboard identifiers
  - No extra dependencies
- Provide view controllers fixed testing data
- Code quality benchmark

# GOTCHAS

- Checking failed images when testing on device
- Reference images must be stored somewhere
- UINavigationController & UITabBarController
- Toggle usesDrawViewHierarchyInRect for
  - UI Appearance
  - visual effect views
  - size classes

# IMPOSSIBLE STUFF

- Animations
- `WKWebView` - doesn't render
- `UIAlertViewController`
- Separate `UIWindow`

# CI INTEGRATION

- CI Friendly
- Default test target
- Buddybuild support

# DEMO
